

## Software Engineer 1 U.S. Citizenship Required

**CTL-SystemWare, a division of Charon Technologies, LLC**, provides turnkey RF product solutions in the areas of systems control, signal acquisition and signals analysis. Our product lines include dynamic solutions for signals acquisition and signals analysis, frequency management, Technical Surveillance Countermeasures, Signals Intelligence, Tempest, image/data rastering, hardware control and remote monitoring. Our expertise allows us to rapidly provide solutions in agile and challenging environments. **Successful candidates must be able to follow ITAR compliance; therefore U.S. Citizenship is required and must also be willing and able to obtain a security clearance and pass a pre-employment drug screen.**

We are seeking a Software Engineer 1 to work on the development of our RF product solutions product line and the next generation of signal and data analysis suites using artificial intelligence and machine learning technologies. This role requires understanding of both theoretical and practical aspects of designing computer software solutions and applying principles and techniques of computer science, mathematical analysis, artificial intelligence and machine learning. Our technologies integrate with field programmable gate arrays, analog to digital converters, embedded processors, and other hardware peripherals including RF components. An ideal candidate will have demonstrable experience designing such solutions in a commercial environment with aggressive time-scales.

This role requires the ability to effectively collaborate with a cross-functional design team in an Agile development environment. Candidates must possess solid interpersonal as well as excellent oral and written communication skills.

### Responsibilities and Duties

#### Ideal Candidates will be proficient with:

- Windows and Linux development; Visual Studio and Eclipse
- MS C/C++, C#, HTML5, JavaScript, node.js, jQuery, CSS3
- Design and architecture knowledge as well as familiarity with object oriented analysis and design patterns (OOA/OOD)
- Wired/Wireless Network development (e.g. UDP, TCP/IP, ZeroMQ)
- Design and debugging of multi-threaded applications

### Qualifications and Skills

#### Preferred skills will include:

- VC++14 Standard, .Net Core.
- Experience in artificial intelligence, machine learning
- Experience designing/building front end web software with HTML, CSS, Javascript, and general web development techniques
- Experience with SQL Server
